BIG NEWS FROM THE ADVANTAGE CONFERENCE!

We are beyond proud to announce that the Laser Electrical Alexandra team took home the *Health, Safety & Wellness Award* for the 5th consecutive year!

We are absolutely thrilled to represent the top tier of our industry as a finalist for ***Electrical Business of the Year!*** Out of more than 50 outstanding Laser Group businesses nationwide, being named among the best is a massive milestone for our team and a true reflection of the hard work put in every single day.

We were also named a finalist for *Networking Excellence*.

A few extra special shout-outs from the night:

- **Michelle:** Crowned winner of the *Women of Laser Award*, our absolute Health & Safety queen!
- **Joey:** Named a finalist for *Technician of the Year* for the second year running!

A massive thank you to all of our wonderful clients and our local community for your continuous support, we couldn't do it without you!

POWER UP WITH SOLAR THIS SPRING!

Our team has been out and about around Central Otago installing new solar and battery systems for both new and existing clients. With electricity prices trending upward as the grid adapts to higher demand, solar is your single best defense against rising power bills. The economic tipping point has arrived allowing household and business owners to generate clean energy, cut reliance on the grid, and sell excess power back.

- **Ultra-Low-Interest Financing:** Most major NZ banks (ANZ, ASB, Westpac, BNZ) are currently offering 0% to 1% p.a. "Green Loans" or "Better Home Top-ups" for solar and battery installations. We can easily provide the precise quotes you need to secure this low-cost funding.
- **Smart Peak Avoidance:** A modern system paired with battery storage lets you avoid expensive peak grid rates (5 PM – 9 PM) while storing excess power generated during the day.
- **Increased Property Value:** Solar isn't just an energy upgrade—research shows buyers are willing to pay more for properties with solar already installed.
- **Trusted Local Backing:** Unlike temporary out-of-town operators, our local team is here for the long haul to back up and support your installation for years to come.

Whether you're looking to cut costs or future-proof your home, we can design and install a system tailored to your exact needs. Give the us a call or flick us an email today to get started!

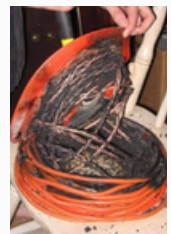

What Our Clients Say:

"Once our decision was made to install solar at our property in Tarras, we believed the most complex and difficult part would be to get the actual design and install completed. We knew what we wanted to achieve but didn't really know what the best solution would be to realise it. So it is fantastic that we now have our solar system installed, up and running and working just as we imagined, thanks to Laser Electrical Alexandra. The system is ground mounted, our preference as we have the space and know that regular cleaning of the solar panels keeps them operating efficiently. Wayne and his team did the calculations and designed a system that met all of our needs in terms of power capacity and generation as well as budget. The word professional is often used but in this case Laser exceeded the normal definition, making the install just so easy and simple. We gave them our goals and requirements and they turned them into reality with such ease and precision. So we highly recommend Wayne and his team at Laser Electrical Alexandra if you are looking to install solar or if you are doing anything electrical. They did all the electrical install at our home five years ago and their professionalism has not missed a beat with this current solar system install being done to their same high standards." – S & S Worthington

SAFETY REMINDER: The Hidden Danger of Coiled Extension Leads

Cable reels and extension leads are handy, but using them while still coiled creates a serious electrical and fire hazard.

- **Why it happens:** Current flowing through a coiled cable generates heat. When tightly wound, that heat gets trapped in the center. The cord can quickly overheat, melting the outer insulation and causing short circuits or fires.
- **What to do:** Always pull out the entire length of the cable before turning on your device even if you're only working a few feet from the socket.
- **Check your leads:** Inspect your cords regularly for cracks, exposed wires, or pinch marks, and replace damaged leads immediately.

OFFICE UPGRADES

Things are looking sharper than ever at the office following a huge team effort to give the place a complete refresh. Thanks to X-Frame, Wayne now has his own dedicated office, while Jacqui and Michelle's main workspace has been upgraded with brand-new flooring and sound-dampening Autex Acoustic Panels. Out in the back, the workshop has had a full overhaul and is now looking incredibly organised. Plus, with our new signage out front, finding the right entrance when you pop in for a visit is easier than ever!

comfortmaster

MITSUBISHI ELECTRIC COMFORTMASTER

Whole Home Comfort. Room-by-Room Control.

ComfortMaster by Mitsubishi Electric combines a Ducted Whole Home Heat Pump with ZoneIQ, delivering discreet heating and cooling throughout your home with greater control over the comfort of individual rooms.

Designed to adapt to the way you live, ComfortMaster lets you set and maintain different temperatures for individual rooms or zones. Intelligent airflow automatically adjusts to each zone's requirements, while rooms not in use can simply be turned off. The result is personalised comfort where you need it, while helping maximise energy efficiency.

Key Features

- Whole home heating and cooling from a Mitsubishi Electric Ducted Heat Pump
- ZoneIQ for room-by-room comfort across up to 10 zones
- Set individual temperatures or turn off zones you're not using
- Intelligent dampers automatically adjust airflow based on each zone's requirements
- Wi-Fi Control for convenient control from your smartphone
- Does not heat and cool simultaneously.

WAYNES RANT

Well, winter is finally packing its bags and spring is officially here, which means warmer weather is right around the corner and it's time to get ahead of the game before summer hits full force. Every year we see the same mad rush when the heat arrives, so here's a quick reminder of what you should be looking at now to keep your property running smooth and comfortable.

Irrigation & Pump Maintenance

With spring underway and a dry El Niño predicted on the horizon, now is the time to ensure your primary sector pump infrastructure is fully prepped. We specialize in servicing, testing, and upgrading high-demand pumps and control systems across horticulture, viticulture, and general agriculture. Whether it's orchard frost protection, vineyard irrigation, stock water, or large-scale crop supply, checking your electrical connections, switches, variable speed drives, and control panels now will prevent critical failures when water demand peaks. Give us a yell to get your irrigation and pumping setup inspected before the heat takes hold.

Solar Power & Energy Independence

Solar continues to be one of the smartest investments you can make for your home or business. With longer days and plenty of sunshine coming up, generating your own power is the best way to keep electricity bills down. We design and install robust, tailored solar and battery systems that you can depend on for the long haul. If you're considering solar, batteries, or off-grid setups, talk to us we don't need a mountain of info to figure out what will work best for you.

We have also been doing some off grid systems lately and I can say in my near 40years in this industry being off grid has never been so attractive.

EV Car Chargers

With escalating conflicts in the Middle East continuing to drive up imported fuel prices, switching to an electric vehicle (and charging it efficiently at home) is becoming an even smarter way to shield yourself from rising pump costs.

If you're driving an EV or planning to buy one soon, don't rely on the cheap, slow charger from the car dealership which can often end up costing much more to install. Talk to us about installing a fast, reliable, smart EV charger at home. We can set it up to integrate with your power rates or solar system so you're always charging at the cheapest possible cost.

Hot Water Heat Pumps

Water heating accounts for a massive chunk of your power bill, making hot water heat pumps one of the best upgrades you can make. We supply, install, and service top-quality hot water heat pump systems. In fact, their return on investment is often even better than solar power! Get in touch if you want to slash your water heating costs today.

Air Conditioning & Bedroom Comfort

Heat pumps aren't just for winter heating; they are top-notch air conditioners for the summer months. Spring is the ideal time to get your existing units serviced or install new air conditioning, especially in bedrooms. There's nothing worse than muggy, hot summer nights and lost sleep. A quiet, efficient heat pump in the bedroom will keep you cool and sleeping soundly all summer long.

Lines & Capacity Charges

Fixed line charges make up a significant portion of power accounts and are rising even faster than the power itself. We can check out your capacity and load to come up with a tailored plan. In fact, we are currently working with one of our customers to sort their capacity to save them \$30K per annum! Give us a call to discuss how we can help you cut down your lines and capacity costs.

Give us a call to get your spring maintenance or upgrades sorted!
